# **Alternative Quellen**

Sie können die Primärquelle entfernen und zu einer alternativen umschalten.

Es kann vorkommen, dass die übereinstimmende Quelle nicht die von Ihnen erwartete ist. Keine Sorge! Unser System zeigt die Quelle an, die es für die relevanteste hält. Sich überschneidende Übereinstimmungen werden dabei als "Alternativen" beibehalten. Dies sind andere Quellen, die Ähnlichkeiten mit diesem spezifischen Textblock aufweisen.

Wenn Sie sich den alternativen, übereinstimmenden Text ansehen wollen, klicken Sie unterhalb des Links zur Quelle auf "alternative Quellen" oder im verdeckten Menü auf "Alternativen anzeigen".

Wenn Sie eine alternative Übereinstimmung einschließen, wird die primäre Übereinstimmung automatisch entfernt und in den Papierkorb verschoben. Sie können dies jederzeit rückgängig machen, indem Sie die Quelle im Papierkorb wiederherstellen. MATCHING TEXT

John D. Ive, PhD Hist, at Cornell summarizes in Modern Aquatic Archeology And Other Naval Gazing 2012 (2) (trans.) The reduced protectionism around the Mediterranean "Just over seven years ago, the Greek authorities finally easing up on their firm ban of SCUBA diving. Their strict approach was based, wisely so, on the fact that there are archaeological treasures basically everywhere in the Aegean seas. Now they have given some authorized diving center permission to dive on a few selected sites. Diving Center Crete and Adventure Blue are the two most famous dive centers in the area."

One of the dive sites is located off the island of Thodorou where permission to dive in an area where a German Messerschmitt plane crashed during the Battle of Crete during World War II in 1941(3) has been recently granted.

Although planes from WWII could be considered ancient by some so do not feel the Greek authorities that there is any immediate danger to the Greek cultural treasures for scuba divers visiting that particular site. It has namely made sure to clear the area of every single gadget of archaeological value before being released until the grasshoppers. It is unfortunately the case that, too often, if not almost always, or perhaps even always, picked souvenirs from the seabed, be it from wrecks or sunken columns and dropped fishing lines. It is also why this ban on scuba diving has been in place for so long. It is said that Jaque Yves Cousteau was immediately ported from Athens Underwater Archaeology Museum after they realized the consequences of his and Gagnan's invention of the "aqua lung" would it become adopted by a the general populace. (4)

#### What is decompression sickness?

Decompression sickness, by many referred to as "the bends" or "diving sickness", is triggered when bubbles of nitrogen forms in the blood and tissue of a body. These bubbles follow when a person rises from deep water to shallow water, where the pressure is lower, too quickly.

V

All changes are autosaved 🔿 🤟 🗹 🛛 PROFILE 🗸

The Greek archipelago, this nautical Eden for the world divers. Clear water with meters and meters of the free and unobstructed visibility. In principle shark free and a Lego box of undiscovered treasures and sunken cities and lower ships from the Phoenician, Egyptian, Greek and Roman times. A "paradise that was lost but now at last recovered" by the renowned free diver and poet Geoffrey van Spladoosh once put it. (1) Now, however, it is not really free access to the kingdom of heaven, but it is one that is controlled and checked very hard by the Greek authorities and its naval forces, although the situation is beginning to improve.

STUDENT'S ASSIGNMENT

INCLUDE IN REPORT

The diver may complain of vertigo or headache, unusual fatigue or tiredness. He or she may have a rash, pain in one or more joints, muscular weakness or tingling in the arms or legs or paralysis. Less often; shock, difficulties with breathing, unconsciousness or death may be seen. The symptoms generally appear in a relatively short period after completing the dive. Almost 50 per cent of divers develop symptoms within the first hour after the dive, 90 per cent within six hours and 98 per cent within the first 24 hours. (5) In practice this means symptoms that appear more than 24 hours after the dive are probably not decompression sickness. An exception is if the diver has travelled in an aircraft or has been travelling in the mountains. Under these circumstances, low pressure can still trigger decompression sickness more than 24 hours after the last dive. As a result, it is wise not to fly within 24 hours of a deep dive.
